RESPONSE TO QUESTION
regarding
Request For Proposals 2023-003

Planning, Design, Software Prototyping and Evaluation
For
Advanced Traffic Management System (ATMS) Data Aggregation Plan
Lake Tahoe Basin Roadways
Smart Grant Program – Stage 1

Question	Response
<ul style="list-style-type: none"> Does the envisioned scope of work for this RFP include deliverables for the project management, planning, engineering, design, and evaluation only? Or it also includes the actual technology implementation in the field (purchasing, installing, integrating the equipment and ATMS software platform)? 	<p>Planning, design, engineering, and evaluation only – Evaluation includes the testing of sensor infrastructure and the testing of SaaS platforms.</p> <p>TTD would look to the consultant for their expertise in recommending sensors and software platforms that will work in our region, climate, and somewhat remote locations. Testing of sensor/SaaS recommendations will be required to validate the system integrity.</p> <p>However, consultants should consider some materials costs within their cost proposals to cover the cost of purchase or rental, etc. of temporary equipment required to test system recommendations.</p> <p>Upon the development of a final plan under this scope, TTD will apply for a Stage II grant to purchase, install, and operate the system, including all field work.</p>
